

Luxury Hotels in Macau Recognize the Value of Hostar's ProHost® System

The Macau Cotai strip is quickly becoming a destination spot for tourists seeking the excitement of gaming while experiencing luxury accommodations. The Cotai strip features a 1.8 mile stretch of beach which will be home to all of the light and glamour of a number of excellent Macau gambling establishments. Last year, official Macau gaming revenues surpassed the Las Vegas strip for the first time, making it the largest gaming market in the world.

Global casino giants, along with local operators, are investing billions of dollars to develop a truly integrated

resort and gaming destination. This year will see the opening of the Sands Podium, The Grand Lisboa, The Venetian (the anchor property for the newly developed Cotai Strip), MGM Grand and The Crown Macau amongst others. The Crown Macau has been the first to recognize, Hostar International, Inc.'s ProHost® System is a smart way to increase efficiency, enhance aesthetics, and boost overall profits.

Whether you are traveling to Hong Kong to escape the busy city for a night or two, or plan an extended stay in Macau, your final destination,

The Crown Macau would be a luxurious choice. The Crown Macau will be one of the premier places for gambling and shopping in Macau. The hotel features 200 tables, 256 guest rooms, and 1300 slot machines. In addition to gambling, the Crown Macau promises to feature some of the most luxurious amenities on the Cotai Strip and throughout Macau. Rooms focus on complete comfort with room service and exquisite furnishings.

In tradition with their upscale appearance, The Crown Macau will install the ProHost® Invisible Housekeeping System to provide the most modern, sophisticated materials management program for their housekeeping department. The Invisible Housekeeping System was developed to help luxury properties maintain a cartless appearance in the guest corridors while providing room attendants with a means to significantly improve productivity and quality. Hostar International, Inc. will be assisting in the opening of this property, offering a turn-key materials distribution system for the Crown's housekeeping department.

ProHost® Systems increase productivity and reduce the overall cost of hotel operations. Worldwide, an average installed ProHost® System will result in a \$0.50-\$1.00 savings per occupied room night. At these daily rates, properties will recognize several hundred thousand dollars in savings in a few years. If properly maintained, a system will pay itself off several times over in a ten year period. What is unique about the productivity gain achieved by the ProHost® System is that the quality of work by housekeeping attendants is improved and their work-related stress is reduced.

HOSTAR NEWS
